Date: Mon,March 11,2019
People present: Kyra, Misan, Simon, Adam, Tim
Agenda:
-Status on tickets
-Talk about how frontend should look

Meeting Notes:

Checking in :
-Misan is saying theres a test failing because the headers aren't set. She needs help. Adam said he would help
-Kyra got her task "Allow teacher to create a class for their office hours - backend" to work.. However she is having trouble with uploading the classList in the frontend to pass to the backend. She can only work on this after Wednesday so if anyone wants to look at her branch and work on that , it would be great. Everyone is also busy until Wednesday so adam/kyra will tackle that issue then
-Tim and Simon want to make a mock up of how the frontend should look so we can agree on the aesthetics. Tim is super busy so Simon will take the lead on this
-Write more frontend tests to be more rigorous
-For frontend, we discussed when a teacher signs in they can see some cards/boxes that represents the classes they teach.. Then once they click the class they will see a calendar that they can click on a specific day to see their schedule

Deadline to have tickets completed: March 17 sunday /March 18 Monday
After this, we will start working on technical write up/ updating p1 docs(swagger, meeting notes etc)
